Rescue-System

How do I check my hard disk for errors ?

That's possible with the SmartMonTools. You can install them under every current distribution with the package manager.

They are also available from the RescueSystem.

For P-ATA disks (Value series):
smartctl -a /dev/hda
(for further disks use /dev/hdb etc.)

For S-ATA disks (Instand64 series):
smartctl -d ata -a /dev/sda

or

smartctl -d sat -a /dev/sda
(for further disks use /dev/sdb etc.)

Further information regarding SmartMonTools can be found at:

- http://smartmontools.sourceforge.net/
- http://www.linux-user.de/ausgabe/2004/10/056-smartmontools/ (German only)

The message " SMART overall-health self-assessment test result: PASSED" in the upper third indicates a correctly working HDD.

Error diagnostics via SMART self test:

- ***Short Selftest (takes a few minutes)***

PATA: *smartctl -t short /dev/hda*
SATA: *smartctl -d ata -t short /dev/sda or smartctl -d sat -t short /dev/sda*

The estimated duration of the test is displayed to you after executing the command.

URL: https://faq2.euserv.de/content/58/82/en/how-do-i-check-my-hard-disk-for-errors-.html

- ***Long Selftest (takes a few hours)***

PATA: *smartctl -t long /dev/hda*
SATA: *smartctl -d ata -t long /dev/sda or smartctl -d sat -t long /dev/sda*

The estimated duration of the test is displayed to you after executing the command.

- **Analysis of the self test:**

PATA: *smartctl -l selftest /dev/hda*
SATA: *smartctl -d ata -l selftest /dev/sda or smartctl -d sat -l selftest /dev/sda*

Output of a defective HDD:

```
# smartctl -d ata -l selftest /dev/sdb
smartctl version 5.37 [x86_64-suse-linux-gnu] Copyright (C) 2002-6 Bruce Allen Home
page is http://smartmontools.sourceforge.net/

Rescue-System

A constant diagnosis is possible via SMARTD Daemon. It conducts short and long self tests (depending on the configuration) and warns the administrator in a problem case so that there's enough time left to react.

Since this is a function for advanced users we recommend consulting the How-tos and information of the respective Linux distribution.
