DNS

Own IN-A records ?

Using an **A Resource Record** a DNS name is assigned an IP address. A-RRs are the most common Resource Records at DNS

Please bear in mind:

As hostname you can specify the corresponding subdomain (e.g. "www") or the following 2 wildcards:

* - stands for all subdomains of the domain (www.domain.de / subdomain.domain.de)

@ - stands for the actual domain (wildcard entry) (domain.de)

Please note that the TTL has to amount to at least 60. Lesser values aren't accepted by the system.
