DNS

If you do not want to use IPv6 for DNS resolution of your domain, please proceed as follows:

1. Login into the customer panel.
2. Select the corresponding domain plan
3. Choose "DNS Management" in the left menu
4. Remove any "AAAA" entries from the DNS zone for your domain.
5. Wait at least 48 hours so that the DNS cache has been updated with the individual providers.
6. Check your domain with a traceroute, whether the IPv6 reachability no longer exists and if your domain reachable via IPv4 again

Note:
* It may be that you need to restart your PC, since it also has a DNS cache that needs to be updated.

If necessary, contact the relevant provider and ask him to update its DNS cache.

Recommendations for IPv6:
EUserv generally strongly recommends the use of IPv6, to make your services reachable everyone in
