

# Hardware

## Why is the USB drive included in my server plan not displayed in the server data?

The USB sticks contained in specific EUserv server plans are not installed by default on your server.

If the USB flash drive is not displayed in the server data after your server order has been processed, please contact our support in writing under [support@euserv.com](mailto:support@euserv.com) so our technicians can cause the installation of your server's USB flash drive.

Once your USB flash drive has been connected, please check by `dmesg` if the USB drive has been detected. If you want to boot from the USB flash drive, the operating system has to be re-initialized.
